

1. A method of making a sign, comprising:  
designing sign information graphics using a computer;  
printing out the sign message onto a front face of a flexible sheet;  
securing the sheet printed side out onto a stiff backing; and  
5       securing a transparent cover sheet over the printed sheet.
2. The method of claim 1, further comprising deploying a mounting device  
disposed on a rear face of the backing, rendering the sign ready for positioning in a  
display position.
3. The method of claim 1, further comprising securing the cover and sheet  
by means of a first adhesive which attaches the sheet to the backing and a second  
adhesive that attaches the cover to the printed side of the sheet.
4. The method of claim 1, further comprising securing the cover and sheet  
by means of a frame which holds mutually superposed edges of the backing, sheet and  
cover together.
